

LAB 1.C

Objective:

The objective of this lab is to copy the given instructions that will give the result by storing a phrase "Welcome to CSCI 320!!!" in a memory location, the goal of the assignment is to better understand and interact with the SBC680000 board to store data into memory and execute the program

Procedure:

First we assigned some values (A-Z, a-z, and 0-9) to some memory location using code or the easy68k instruction set. Instructions are given such that the address 2200 would contain "Welcome to CSCI 320!!!" when program is executed.

Program Description:

This program stores uppercase letters starting from \$00002000 memory location, lowercase from \$00002020, and numbers from \$00002040. The code is used to display "Welcome to CSCI 320!!!"

LAB 1.O-----

Objective:

The objective of this lab is to copy the given instructions from Lab 1.C and manipulate using address register direct, address register indirect, post-increment, pre-decrement, and displacement in order to store your name starting at memory location \$2100, and also store a SSN at memory location \$2160, the goal of the assignment is to better understand and interact with the SBC68000 board to store data into memory and execute the program while getting a expected output using a variety of address register commands.

Procedure:

First we assigned some values (A-Z, a-z, and 0-9) to some memory location using code or the easy68k instruction set. Instructions are given such that the address \$2100 would contain your name and address \$2160 would contain a social security number when the program is executed.

Program Description:

This program stores uppercase letters starting from \$00002000 memory location, lowercase from \$00002020, and numbers from \$00002040. The code is used to display your name and a social security number in two separate locations. The program is to use multiple different addressing modes.

LAB 2.C-----

Objective:

The objective of this lab is to study step by step the processing of the data registers and address registers with different memory partitions and using a variety of different addressing modes like pre-decrement and post-increment.

Procedure:

First we assigned we load up our effective addresses and assign specified values for specific address registers, then move memory locations to different data registers. Once the memory setup is complete we load our memory addresses locations and assign them the specified values or contents given in the lab and load our contents into data register.

Program Description:

This program simulates an experiment that helps to understand memory partitions and using different addressing modes and allows step by step tracing for each instruction with what is happening inside the memory locations and the registers themselves. The program uses locations \$2518-\$2556.

LAB 2.O-----

Objective:

The objective of this lab is to store a user defined vector "A-J" at location \$004AC4 and using relative addressing modes reverse the vector beginning at location \$004ACE.

Procedure:

First we loaded our effective address \$00000000 into address register A0, then LEA our wanted start position of our created vector with program counter into A0. Then moving copies of the locations into our data registers we can reverse the vector so the vector reads "J-A".

Program Description:

This program simulates an experiment that helps to understand how to manipulate the locations of a stored vector and using data registers to reverse the vector.

Source File:

LAB 3.C-----

Objective:

The objective of this lab is to study memory partitions and addressing modes.

Procedure:

First we loaded our effective address \$00002100 into A1, after initializing all of the required address and data registers, then we setup our memory partitions from \$00002100-\$0000211C, then perform the labs instruction set.

Program Description:

This program simulates an experiment that helps to understand how to manipulate the initializations of the registers and memory partitions.

Source File:

LAB 5.C-----

Objective:

The objective of this lab is to study the use of pointer types and linked data structures.

Procedure:

First we move our data into different memory locations stated by the instructions of the lab, we load effective addresses into address registers A1-A6, and use a pointer going to A5 between the two.

Program Description:

This program simulates an experiment that helps to understand the use of a pointer and linked list data structure in the x68 instruction set.

LAB 4.O

Objective:

The objective of this lab is to use Hamming technique for encoding and decoding information to enable detection and correction.

Procedure:

First we have our 4bits (abcd) and we want the parity bits (rst) these bits are known as the check bits, the resulting outcome is abcrdst .

Program Description:

This program simulates use of Hamming encode and decode algorithm.

The screenshot displays the EASY68K software interface. The top window shows the 'Registers' section with D0-D7, A0-A7, T, S, INT, XNZVC, Cycles, and PC fields. Below this is the 'Code' window showing assembly instructions like LSR.W, EOR.W, MOVE.B, and LSL.W. The bottom status bar indicates 'S0 = 68KPROG 20CREATED BY EASY68K' and '.S68 file read successful'.

LAB x86

Objective:

The objective of this lab is to be introduced to x86, analyze, edit, assemble, link and run the listed programs for the lab activity.

Procedure:

Using the GUI Turbo Assembler to analyze, edit, link and run the programs. Basic commands of x86, assemble, link, and run.

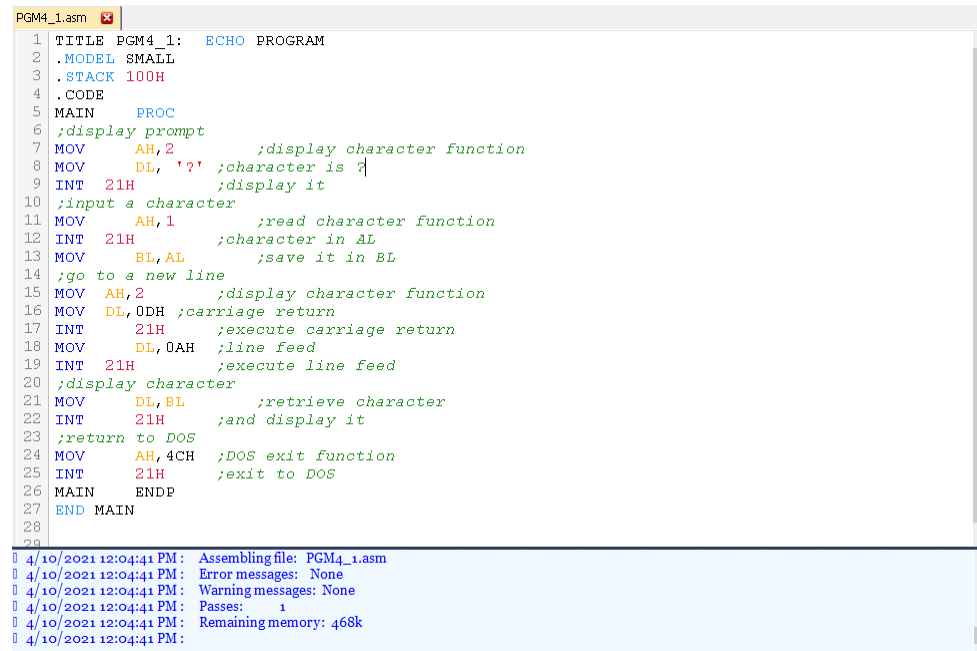

Program Description:

This program simulates use of the x86 instruction set.

Source Files:

PGM4_1:

```
TITLE PGM4_1: ECHO PROGRAM
.MODEL SMALL
.STACK 100H
.CODE
MAIN PROC
;display prompt
MOV AH,2 ;display character function
MOV DL,'?' ;character is ?
INT 21H ;display it
;input a character
MOV AH,1 ;read character function
INT 21H ;character in AL
MOV BL,AL ;save it in BL
;go to a new line
MOV AH,2 ;display character function
MOV DL,0DH ;carriage return
INT 21H ;execute carriage return
MOV DL,0AH ;line feed
INT 21H ;execute line feed
;display character
MOV DL,BL ;retrieve character
INT 21H ;and display it
;return to DOS
MOV AH,4CH ;DOS exit function
INT 21H ;exit to DOS
MAIN ENDP
END MAIN
```

The screenshot shows an assembly editor window titled 'PGM4_1.asm'. The editor displays the source code for the PGM4_1 program, which is an echo program. The code is written in MASM syntax and includes comments. The assembly output is shown at the bottom of the window, indicating that the program was successfully assembled without any errors or warnings. The output also shows the number of passes (1) and the remaining memory (468k).

END MAIN

The screenshot shows an assembly editor window titled "PGM4_2.asm". The editor contains the following assembly code:

```
1 TITLE PGM4_2: PRINT STRING PROGRAM
2 .MODEL SMALL
3 .STACK 100H
4 .DATA
5 MSG DB "HELLO!$"
6 .CODE
7 MAIN PROC
8 ;initialize DS
9 MOV AX,@DATA

;DOS exit

MOV AH,4CH

INT 21H ;DOS exit

MAIN ENDP

END MAIN

The screenshot shows an assembly editor window titled 'PGM4_3.asm'. The editor contains the assembly code for a program that converts lowercase letters to uppercase. The code is as follows:

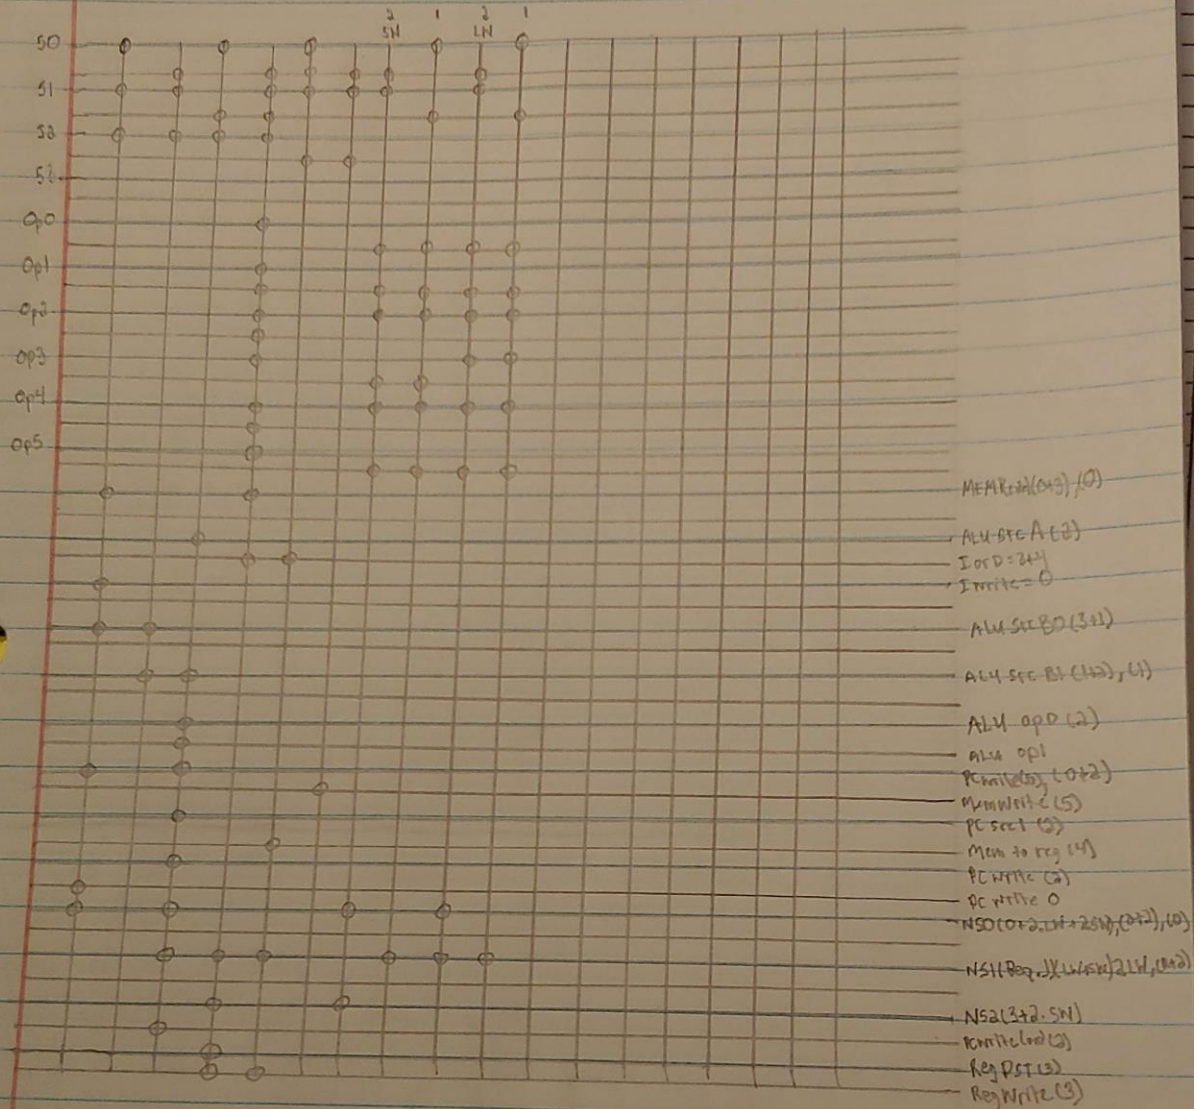

```
1 .STACK 100H
2 .DATA
3 MSG1 DB "ENTER A LOWER CASE LETTER: $"
4 MSG2 DB 0DH,0AH,"IN UPPER CASE IT IS: "
5 CHAR DB '?','$'
6 .CODE
7 MAIN PROC
8 ;initialize ds
9 MOV AX,@DATA ;get data segment
10 MOV DS,AX ;initialize DS
11 ;print user prompt
12 LEA DX,MSG1 ;get first message
13 ;display string function
14 ;display first message
15 ;input a character and convert to upper case
16 ;read character function
17 ;read a small letter into AL
18 SUB AL,20H ;convert it to upper case
19 MOV CHAR,AL ;and store it
20 ;display on the next line
21 ;get second message MSG2
22 ;display string function
23 ;display message and upper case
24 ;DOS exit
25 MOV AH,4CH
26 INT 21H ;DOS exit
27 MAIN ENDP
28 END MAIN
```

Below the editor, the assembly output is displayed, showing the assembly of the file 'PGM4_3.asm' on 4/10/2021 at 12:52:53 PM. The output indicates that there were no error or warning messages, 1 pass was made, and 467k of memory remained.

```
